◆ At yesterday's quarterly meeting of the board of directors held at Philadelphia, a regular quarterly dividend of twenty-five cents per share, with an additional dividend of ten cents per share, was ordered payable to the stockholders of record of March 31, 1910.

#### Mount Etna, in Italy, is Active and Lava Flow Destroys Surrounding Country

By Associated Press.  
CANTANIA, Sicily, March 24.—Mount Etna is again in eruption. A pronounced movement within the crater began last night and steadily increased in volume and tonight the gravest fears are entertained as to the results if the activity continues.  
From Catania a correspondent motored toward the mountain. Twelve miles from the crater a thick curtain of smoke was encountered which entirely concealed Mt. Etna. At Noccolosi, ten miles from the crater, the entire population had gathered in the public square to watch the volcano, which appeared as a black phantom above. Now and then it was illuminated with flashes of light. Higher up the rain of cinders became thicker and extended across the mountain. A deep roaring was heard and the earth shook.  
One of the guides cried "An earthquake," and could hardly be induced to continue. Hot cinders covered the ground like a thick carpet. A peasant was encountered coming down and he said: "The fire is rushing down, burning everything. The lava is like a red hot river."  
Proceeding a little farther, colossal columns of black smoke could be observed. Occasionally they were cut by flashes of fire, presenting an awe inspiring spectacle. The wind opened the clouds for a moment and a wide strip of fire could be seen in the distance, advancing with monstrous contortions. It fell like a torrent from Mount Capriolo, spreading out in the valley below. The lava flow had already reached the vineyards above San Leo and Binazzo, seven miles from the crater, and had buried many peasants' houses.  
It came in several streams and united in one great mass, twenty feet high and 1,500 feet wide. Its velocity was estimated at three or four feet a minute.  
This mighty wall of lava tonight was not more than five miles from Belpasso and Nicolosi. The meteorological station on the mountain side has been destroyed and the village of Borrelo is in danger. The populace is terror stricken and the people are fleeing from their homes.
